CONDITIONING TOOL GUIDE

See every rugby running drill run on a field with distance, changes of direction and work to rest, then build sessions and plans. For athletes learning a drill and coaches designing the week.

FOR ATHLETES

Know the drill before you run it

Look up a drill your coach gave you, watch it from above or behind the player, slow it down and run the session in order at training.

FOR COACHES

Design, check and share

Build a session to a target distance and energy system, plan a week, add your own drill and send the session as a PDF.

Open it from www.stperformanceglobal.com/athlete-support/conditioning/ or from Athlete Support in the website menu. It asks for an access code, so ask Simon. Add it to your home screen to use it like an app.

THREE VIEWS

VIEW	WHAT IT DOES
Drill view	The visual, controls and the searchable drill list. Search by name or open a group and tap a drill to run it. Camera: Drill, Pitch, Top or Chase. Speed 0.5x to 2x and **Loop**. The camera icon beside a drill saves a short video you can send.
Session view	Set a target in metres and an energy system. **Roll the dice** adds drills with reps that land within 5% of the target, or add them one at a time. Filters narrow by phase, changes of direction, down-ups, contact and crawl. **Run session** plays each drill in order and ticks it off.
Programme view	**Upload programme PDF** loads the running and speed work from a Programmer PDF, week by week. Set the start date and **Jump to today**. **Programme tools** builds a week plan from weeks, days, blend and progression. **Build programme in builder** jumps to the Programmer.

FOR ATHLETES

1. In **Drill view** type the drill name from your plan into the search and tap it.
2. Watch it from the Pitch, Top and Chase cameras and slow it to 0.5x. **Loop** repeats it while you learn where the cones go.
3. To load a whole plan, press **Upload programme PDF** in Programme view with the PDF your coach sent, then pick the week and session.
4. At training open **Session view** and press **Run session**. Time your rests with your own stopwatch.

FOR COACHES

1. **Build a session.** Set the target distance and energy system in `Session view`, then `Roll the dice` or add drills. Reps scale to land on the target.
2. **Plan a block.** `Programme tools` generates a week plan. `Save current session` adds a session to the plan and `Add progressed copy` builds the next step.
3. **Add your own drill.** `Add drill` builds a drill step by step on the field. Preview it, save it to My drills and share it with `Copy drill code`.
4. **Share.** `Save PDF` writes the session as a PDF that the athlete reopens with `Import PDF or file`. `Download drill library PDF` prints every drill with diagram, script and volume.
5. **Short notice.** For a quick session a player can open from a link, use the Running Drill Viewer. It has its own guide.

PITCH, UNITS AND PHONES

- Choose the field (rugby, American football or soccer, 110 m) and speed units (m/s, km/h or mph). Distance markings show on both sidelines and yard numbers on the football field.
- Turn a phone sideways for a wide view. The `Panel` tab on the right edge slides the session or programme column in and out so the video keeps its size.
- Plans, sessions and My drills stay in the browser that made them. `Save backup` and `Restore backup` in Programme view keep a copy, and `Save PDF` exports a session.

> The Conditioning Tool covers the running and speed work only. Gym lifts and indoor conditioning stay in the Programmer.

SUBSCRIBE AND PROGRAMME WITH US

Subscribe to keep the Conditioning Tool and Viewer, or book a call for programming and prescription.
